Clinical evidenced-based audit in Occupational Therapy: a workshop

Joseph Baylon

Barts and The London NHS Trust, London, United Kingdom

Occupational Therapy has always been challenged for its worth and existence. One way of demonstrating the OT benefits to our stakeholders is through clinical evidenced-based audit. This workshop aims to demonstrate good understanding of the principles and practices of clinical evidenced-based audit in Occupational Therapy, specifically:

- to impart better understanding on what an audit is, the audit cycle and its difference with research and service evaluation
- to practice writing a simple proposal for a potential clinical audit
- to gain tips, techniques and tools used in clinical audit
- to increase awareness in the current trends of evidenced-based clinical audit

This workshop aims to capture a maximum of 20 audience with basic/no experience in doing an audit; and to complete its delivery with in 1.5 hrs using various teaching methods, including, but not limited to:

- interactive workshop using multimedia tools
- problem based discussions
- group work
- lecture /seminar
