## **European Master of Science in Occupational Therapy**

Eric Tigchelaar

*Amsterdam University of Applied Sciences, Amsterdam, Netherlands*

The aim of this poster is to inform delegates at a glance about this innovative jointly delivered master of science programme. The poster shows the overall design of the programme. It gives facts and figures about students: an overview of their countries of residence, their age, gender and work setting, and their success rate. It also gives the outcomes of a survey among the graduates and their employers in several European countries. The survey reflects their experiences and opinions concerning the degree.

The poster also displays data on the relevance of the master's programme in terms of professional development, and the extent which the programme leads to improvements in graduates' work situation. The analysis of the data clearly demonstrates that the OT-EuroMaster programme essentially fulfils the expectations of graduates and their employers. And it shows that this international Master of Science in Occupational Therapy has a significant impact on graduates' career opportunities.

The OT-EuroMaster is a professional step towards sharing the world of occupation.
